

MARKETING CAMPAIGN PERFORMANCE ANALYSIS

Practical Excel Data Analytics Project

Presented by: Nimca Wehliye

Course: Excel for Data Analysis • Microsoft Excel

RAW DATA → CLEAN DATA → FORMULAS → PIVOTTABLES → CHARTS → KPIs → SLICERS → DASHBOARD → FINDINGS → RECOMMENDATIONS

1. Project Overview

What the project is designed to answer

- Analyze marketing campaign performance using Excel.
- Evaluate Budget, Leads and Conversions.
- Compare performance by Channel, Region and Year.
- Transform raw data into reliable business insights.
- Support management decisions with findings and recommendations.

Dataset overview

Measure	Value
Original records	300
Duplicate records removed	7
Clean records used in analysis	293
Original variables	7
Important variables	Campaign_ID • Start_Date • Channel • Region • Budget • Leads • Conversions

2. Dataset Introduction

Source: 20_Marketing sheet supplied in the course dataset workbook.

Item	Description
Dataset name	20_Marketing
Source	Course dataset workbook
Purpose	Measure campaign efficiency and identify channels/regions with stronger conversion results.
Original records	300
Confirmed duplicates removed	7
Clean records	293
Variables	7

Important variables

- Campaign_ID — identifies each campaign.
- Start_Date — campaign date used for Year and Month analysis.
- Channel — marketing channel such as Search, Social Media, Email and Radio.
- Region — geographic market.
- Budget — campaign spending.
- Leads — generated leads.
- Conversions — successful conversions.

3. Data Preparation & Cleaning

Cleaning was completed before analysis to protect the accuracy of totals and PivotTables.

Step	Action
1 — Inspect	Review raw rows, missing values and duplicated records.
2 — Clean	Remove 7 exact duplicates; standardize text; fill appropriate missing values.
3 — Validate	Check fields and derived metrics before summarization.
4 — Analyze	Use formulas, PivotTables, charts and dashboard KPIs.

- Standardized text using TRIM and case normalization.
- Filled missing categories with “Unknown” where appropriate.
- Filled missing numeric values using the median.
- Filled missing dates using the median date.
- Created derived fields: Year, Month, Conversion Rate and cost metrics.

4. Excel Formula Analysis

The workbook demonstrates the required analytical functions.

Category	Functions demonstrated
Basic	SUM • AVERAGE • COUNT • MIN • MAX
Conditional	SUMIF • COUNTIF • AVERAGEIF
Logical	IF • AND
Date	TODAY • YEAR • MONTH • DAY • NETWORKDAYS
Text	TRIM • UPPER • PROPER • SUBSTITUTE

Metric	Result
Total Budget	\$821,022.84
Average Budget	\$2,802.13
Campaign Records	293
Minimum Budget	\$-9.00
Maximum Budget	\$10,024.00
Total Leads	134,724
Total Conversions	24,658
Overall Conversion Rate	18.3%

5. PivotTables & Data Visualization

Channel performance

Channel	Campaigns	Budget	Leads	Conversions	Conversion Rate
Email	41	\$112,384.87	18,307	3,724	20.3%
Influencer	37	\$101,777.99	17,241	2,755	16.0%
Radio	34	\$109,347.26	16,636	1,780	10.7%
Search	81	\$210,050.29	36,249	8,434	23.3%
Social Media	82	\$233,155.52	36,259	5,765	15.9%
Unknown	18	\$54,306.93	10,032	2,200	21.9%

6. KPI Dashboard

TOTAL BUDGET	TOTAL LEADS	TOTAL CONVERSIONS	CONVERSION RATE
\$821,022.84	134,724	24,658	18.3%

Management can see the key numbers immediately and compare performance across regions.

7. Findings & Recommendations

Key findings

- Search generated the highest conversion volume (8,434) among the channels.
- Radio had the lowest conversion rate (10.7%) among the channels, indicating an area for optimization.
- Bosaso recorded the strongest regional conversion rate (20.6%).
- The cleaned dataset contains 293 valid records after removing 7 duplicates.
- Overall conversion rate is 18.3%, giving management a high-level efficiency benchmark.

Recommendations

- Gradually increase investment in high-performing channels such as Search, while monitoring cost per lead and conversion rate.
- Review the Radio campaign strategy, creative, targeting and landing experience to improve conversion efficiency.
- Document and replicate successful practices from Bosaso in other regions through controlled tests.

Conclusion

The project demonstrates that Excel is not only for data entry — it is a tool for analysis and informed business decisions.
